August 7, 2018

Buyers and Visitors,

Welcome the 17th Annual Southern Producers Replacement Heifer Sale. Thank you for your interest in this top quality set of females. The consignors have established a stringent set of guidelines for that each bred heifer must meet in order to be sold through this sale.

Each heifer will have been palpated to confirm pregnancy within 30 days of the sale. Pelvic measurements are included in order to reduce the risk involved in calving these heifers. Cattle have been screened for obvious defects and any other problems. If you see a problem we might have missed, please bring it to our attention before the sale.

Over the past 17 years our quality has steadily improved. This year's offering is no exception. Throughout this catalog, you will find females that conceived during a tight breeding seasons and that will sell in ideal body condition score for calving.

In today's market quality and consignor reputation are very important. Service sire EPDs are part of the catalog. If it anytime you have a question, feel free to ask our consignors. They will be glad to share the information with you.

Because of Brahman influence, some heifers are a little later maturing. With that said, some consignors elect to calve their heifers out as three year olds. We allow cattle to sell that have just cut their three-year-old teeth because of that reason. These females are indicated in the catalog.

Thanks for your consideration.

We have been in the cattle business for over 30 years. We have been artificial inseminating for 15 years, selecting for functional, market-acceptable cattle that maintain eye appeal. The past 6 years we have spent concentrating on improving the replacement heifer program. Remington-Lott Farms strives to raise replacement heifers that meet quality and performance criteria and yet maintain eye appeal.

We maintain a 60-day breeding season and cull accordingly. Heifers were born in September and October of 2016, and will calve as true two year olds. On breeding replacement heifers, we use proven A.I. calving ease sires. **These heifers are safe to the A. I. Service as no cleanup bull was used!**

Remington-Lott's cattle have all had multiple rounds of vaccinations on a complete herd health program prescribed by Dr. James Alexander of Yazoo City, MS.

If you have questions, please contact Greg Lott at (601) 940-2675.

Owned by: Baldrige Brothers Angus, NE; ABS Global, Inc., WI

In Command and In Demand

- ✓ Arguably the most complete young bull to sell in the spring 2016 sale season
- ✓ Impeccable calving ease and maternal tabulation with COMPLEMENT, HOOVER DAM, and STYLES UPGRADE up close in his pedigree
- ✓ As his mother's first natural calf, COMMAND helped her to a rock'n good start with a 69 lb BW and ratios of 113 WW & YW, 154 IMF and 107 REA
- ✓ Awesome phenotype, tremendous body and thickness - he's deep, thick, and square made
- ✓ His first calf crop stands out from both a type and data perspective

Robinson Farms, Inc.

978 Guide Shiloh Road
Brandon, MS 39042
(601) 906-1796

These heifers are all home bred and raised.

33- #39 are sired by Stonewall of RRR 222W6, a deep bodied individual from Salacoa Valley Brangus. They are bred to a Polled Hereford that I really like and will make some Super Baldy calves.

The baldy females are sired by our herd sire from McGuffee Herefords. They are bred to a Reg. Angus that we have used for several years with no problems at all.

All heifers were raised on our vaccination protocol, boosted in May 2018 with their mates. They are all very docile, raised on forages with very little supplementation, and are ready to go to work.

If you have questions, please contact Bob Robinson at (601) 906-1796.

Mike Murry

1754 Ovett Petal Road
Ovett, MS 39464
(601) 606-4618

Murry Farms is proud to present these fancy, super baldy heifers straight out of our registered Brangus herd. They are a result of a high-powered 4M & Barber Farms Hereford clean-up agenda that follows our embryo transfer and AI breeding program here at Murry Farms.

These heifers are current on all vaccinations and de-worming. All are safe in calf to our low birth weight Brangus bull (pictured below). This bull is also used on all of our registered Brangus heifers for his calving ease ability. These heifers will calve as true two year olds.

They are ready to go to work! This investment will be sure to please you as these heifers have been raised on forages with a good mineral program and very little supplementation.

Jacob Megehee

48913 MS Hwy 14 East
 Macon, MS 39341
 (662) 361-1941

We have been in the commercial cattle business since 1970 and have chosen seedstock that work well for us in the heavy, black soils of Noxubee County and the hot summers and high humidity of Pearl River County. Five of these heifers are 7/8 Brangus. The remaining 11 heifers are Brangus sired with most out of ½ Hereford and ½ Brahman dams, the “Queens of the South”. They are the product of 19 years of using calving ease and high growth EPDs as part of our bull selection criteria. Our cows are selected to have good attitudes, be easy-keeping and have high production. Of the last 1,187 cows and heifers that have calved on our ranch, we have only assisted with 2 deliveries – one was backwards and the other was out of an obese heifer (that was too lazy to push). Pregnancy checked on 8/2/18. Heifers are up-to-date on all recommended by veterinarian. Heifers have also been vaccinated for Brucellosis and Scour Guard. Heifers have been de-wormed. Heifers are bred to low birth weight, calving ease, Town Creek Brangus bulls.

Heifer mates that were not selected as replacement females were fed out in Garden City, Kansas. These heifers received a premium of \$97.31 each over the live. That made these heifers values at \$144.77 / cwt. These heifers went to the feedyard with an average weight of 625 lbs and were harvested at an average weight of 1309 lbs. Their average daily gain equaled 3.41 lbs/d. Heifers netted \$1392.13/head. The table below shows performance data.

mgfarms@bellsouth.net
601-597-5995

Here are some fancy Hereford/Red Angus heifers with a touch of Brahman in some of them. These heifers are 20 months old and will calve as true 2 year olds. These heifers are bred for longevity, being easy fleshing and having milking ability. These girls have been grown out on pasture and will not melt when you take them home. They are current on all vaccinations and deworming. They are bred to 4M low birth weight Angus bulls. Registration numbers 17844612 & 17844611.

MG/4M Farms has been raising quality replacement heifers for 25+ years. We are also in the Registered Hereford and Angus seedstock business, including commercial cattle. We have an annual bull sale the third Saturday in February, where we also include some of our quality commercial heifers. Visitors are always welcome!

Ladner x Ladner Farms

1105 Hubert Dedeaux Rd.
Kiln, MS 39556
(228) 216-3404

Ladner x Ladner strives to provide high quality Brangus and Brangus baldy replacement heifers. We enjoy raising Brangus type cattle for their strong maternal characteristics and heat tolerance. Ladner x Ladner cattle are handled on a regular basis and have been desensitized to handling, penning, and sorting. The cattle have great dispositions. With the rising costs of feed, we aim to rely on summer and winter grazing for the majority of our feed sources.

Heifers were A.I. bred to Shiefelbein Effective 61, AAA: 17065105.
Heifers were exposed to a low birthweight Angus bull.

Salt Log Branch Farms

P.O. Box 2909
 Laurel, MS 39442
 (601) 498-3992

This is a great group of heifers with good disposition. They are handled on a regular basis and have been desensitized to penning and sorting. These heifers are up-to-date on their shots and are very healthy. They are bred to one of our low birth weight Registered Polled Hereford bulls- CMF 135W Attire 58A. We have been breeding him for 3 years. He has great genetic quality and has produced a lot of great calves with no problems during calving season.

T & T Farms

48 Rogers Brothers Road
Wiggins, MS 39577
(601) 762-5003

True two year old heifers. Calving should start around middle of October. T&T Farms has been a closed herd for the past 16 years with the exception of new bulls. We keep our own replacement heifers each year and focus on buying bulls with good genetic quality. The cattle in our herd are on a strict modified-live vaccination program which includes vaccines for IBR-BVD, Hardjo bovis, lepto, and clostridia. All cows are given one round of vaccines a year with de-wormer as needed. Calves are given two rounds of modified-live IBR-BVD and clostridia vaccine. These heifers are up-to-date on their shots and healthy. As a certified BQA producer all cattle are handled according to Beef Quality Assurance standards and a selected for a more docile cowherd and calf crap. Heifers were A.I. bred to LT Enterprise 5213 then cleaned-up with low birth weight Angus bulls from Tanner Farms by Buford Historian Z849 and Final Answer 0035. T&T Farms bred our own replacement heifers to these bulls last year and had no problems during the calving season.
